

White Admiral

Limenitis camilla

Regional Priority: Medium
Of Conservation Concern in Nottinghamshire

Distribution 2000 - 2004

Foodplants

Larvae feed solely on Honeysuckle (*Lonicera periclymenum*), adults will feed on Bramble (*Rubus fruticosus*) nectar.

Habitat

Mature woodland rides with sunny glades and patches of bramble. Eggs are laid on stands of Honeysuckle about 1-2m above ground.
